

Monthly Report

FUND DESCRIPTION

MercLin Institutional Equity Fund RDT-DBI (sub-fund of MercLin Institutional Fund) meets the requirements imposed by the applicable regulations to benefit from the Definitively Taxed Income regime (DBI-RDT): the sub-fund distributes at least 90% of the received income, after deducting salaries, commissions and charges. The company-shareholder can – as of income year 2018 – deduct 100% from the taxable basis of the income distributed by the sicav resulting from dividends or from capital gains on shares, which meet the requirements of the DBI-RDT deduction. The fund follows the equity strategies of the MercLin Global Equity fund.

RESULTS^{2,3}

	YTD	2019	2018	2017	2016	2015	2014	2013	2012	2011
MercLin DBI/RDT R	-7,70%	+24,93%	-10,14%	+5,74%	+8,74%	+12,98%	+20,14%	+22,74%	+7,97%	+1,53%
MercLin DBI/RDT F	-7,58%	+25,18%	-10,01%	+5,95%	-	-	-	-	-	-
MSCI AC World Euro ⁶	-1,69%	+28,93%	-4,85%	+8,89%	+11,09%	+8,76%	+18,61%	+17,49%	+14,34%	-4,25%

³ It concerns annual (except YTD) performance numbers based on historical data and which are no guarantee of future results. YTD is a cumulative return over a period from the 1st of January of the current year till a given date (see above) in the current year.

⁶ MSCI AC World Euro Net dividend reinvested. The investment policy of the subfund does not include a tracking error objective with the benchmark. Performances of the subfund may therefore vary from the performance of the benchmark.

MANAGER'S COMMENT

Throughout 2017-18, Warren Buffett's Berkshire Hathaway took the market by surprise, amassing a significant stake in Apple stock. The surprise mostly came from the fact that Warren Buffett had repeatedly explained that his lack of technology holdings was a result of an insufficient understanding of the sector. Today, however, the move is considered one of the most successful trades of all time. In a short period, the team at Berkshire Hathaway more than tripled its holding's value, bringing it to roughly USD 125 billion from the USD 35 billion paid initially for during the acquisition. This enormous capital gain of USD 90 billion is in itself larger than the market capitalisation of companies such as American Express, Target or Goldman Sachs. These numbers are more than impressive, and they constitute a sharp rebuttal of critics who claimed at the time that Warren Buffett had perhaps lost his touch. For anyone questioning his stock-picking skills or his ability to engage in large transactions in the market, the Apple trade amply put those concerns to rest. Moreover, with him referring to Apple as Berkshire Hathaway's third-largest business after insurance and railroads, it is clear that he views the position in terms of business ownership rather than as a stock to trade. Apple today represents roughly one-quarter of Berkshire Hathaway's market capitalisation and thus significantly contributes to the firm's value.

Risk indicator:

The value of an investment in a sub-fund increases or decreases over time. At the time of resale, the price of your shares may be less than the original price, representing a loss. If you invest in a sub-fund whose currency is different from your own, exchange rate fluctuations can also reduce your gains or increase your losses.

The above risk level is calculated on the basis of the sub-fund's volatility over the medium term (i.e. on the basis of actual changes in its value over the last five years or on a simulation, if the subfund was created within that period). The volatility of the sub-fund may increase or decrease over time, which may change its risk level.

The subfund's risk level reflects the following factor(s):

Equity investments have greater volatility and higher risk than investments in bonds and money market instruments. The risk level does not reflect the potential impact of unusual market conditions or unforeseen events that may increase risk or trigger other risks such as:

- Counterparty risk: the subfund can lose money as a result of the failure of a market player with which it does business.
- Credit risk: risk associated with bonds becoming worthless when the issuer of the bond is not able to repay its debt on maturity.
- Liquidity risk: some financial securities may be impossible to sell quickly at a given time or may have to be sold at a discount.
- Management risk: under abnormal market conditions, the usual management techniques may be ineffective or unfavourable.
- Operating risk: in any market, and especially in the emerging markets, the subfund may lose some or all of its money if there is a failure in the custody of assets or in case of fraud, corruption, political actions or any other adverse event.

² Source data: Bloomberg, Morningstar & Banque Degroof Petercam Luxembourg.

⁵ Ongoing charge: charges taken from the subfund over a year (including management fees).

In case of **complaints** concerning this fund, please send an email to compliance@mvam.eu. If you do not obtain a satisfactory response, you can always contact the Ombudsman of the financial services sector through the website: <http://www.ombudsfin.be/en/individuals/introduce-complaint/>.
